

R11

Lightest and Thinnest Fully Rugged Tablet PC

- Customer: Polish System Integrator
- End User: Polish Ambulance Service
- Product: R11
- Application: Public Safety

When our customer was commissioned to modernize ambulance operation in Poland, they diligently identified the need for a mobile system that provides long hours of work, high computing power for running call response/medical information management software, and reliable RF connectivity to quick transfer diagnosis records to the nearest hospital for advanced preparation. The system must allow precise GPS tracking to direct the ambulance to the site of call while keeping the hospital informed of the its location at all time.

As such, they chose R11 from DURABOOK, the most advanced light-weight rugged tablet PC that offers complete protection against the harsh environment that public safety workers operate in.

R11 was certified for MIL-STD 810G, IP65, C1D2, and MIL-STD-461F standards. It weighs just 1.2 kg and provides up to 7 hours of battery life. "It's real thin, light, and strong. It runs long enough to finish our shaft. For the things we do, R11 is an ideal tool." said one ambulance driver.

DURABOOK has been working with Public Safety workers like our Polish customer around the world. As lives are on the line, they stand ready to serve the public 24/7. As are we to them.

DURABOOK. Anytime Mission Calls.
