

TA10

Fully-Rugged Tablet PC for all applications in the harshest environment

- End User: Sxhertz police Department
- Product: TA10
- Application: Public Safety

“We were looking for a mobile system that was multi-functional: GPS tracking, signature capture, video camera, and real-time communications, and it needs to do all these under our working environment for the whole shift.” Texas temperatures regularly top 105 degrees Fahrenheit in the summer. Officers of the Motorcycle unit must work in this excessive heat, so their tablet computers must do the same.

Since deploying the fully-rugged tablet PC, the life of Motorcycle units of the Sxhertz Police Department have gotten easier under the scorching sun.

“The GPS tracking on this fully-rugged tablet is rock solid. It provides accurate turn-by-turn directions and has helped us make the most of our shift.” said one officer. When they are in route to a call, headquarters knows where they are at all times. When they have been dispatched to a residence, the tablet provides instant access to caution notes and area advisories in real time.

TA10 has been tested and certified for MIL-STD 810G, IP65, 5 feet drop and MIL-STD-461F standards to handle the harshest environment. The built-in high capacity battery and hot swappable function allow the system to work for any mission requires.

DURABOOK has been working with public safety workers like the Sxhertz Motorcycle officers around the world to become more efficient. With shortened response times and access to instant information, they stand ready to serve needs of people. As we stand ready to serve theirs.

DURABOOK. Anytime mission calls.
